DETAILED ACTION

Status of the Claims

1. This is in response to applicant's remarks filed on 06/14/2006.
Claims 1-11 are presented for examination. Claims 4-6, 8-10 have been amended.

Drawings

2. The drawings submitted on 06/14/2006 are acknowledged.

Allowable Subject Matter

3. Claims 1-11 are allowed.

The following is the examiner's statement of reasons for allowance:

With respect to independent **claim 1**:

Brinkmeyer et al. (US Patent 5,619,573) is drawn to vehicle-related apparatus which authorizes access to a vehicle on the basis of an exchange of electronic codes between a user key unit and a vehicle-based control unit. Brinkmeyer teaches use of one-way functions for generating the codes on an iterative basis wherein iterations follow a sequential indexing.

Brinkmeyer recites an apparatus wherein only samples taken at selected intervals of the full range of inverse images (input values) need to be stored in memory.

Computation by recursive application of the one-way function takes place between the

Art Unit: 2612

sampled images rather than the full range from start to end. However, Brinkmeyer fails to disclose a certain number of levels G from which a certain number of iterative function value calculations can be performed according to $G = \lceil L(N)/b \rceil$ where L is the number of bits required to represent N , N is the starting value, and b is a user selectable basis.

She (US Patent 7,512,230) is related to a method for reducing computational workload suitable for encryption authorization systems which use public key type algorithms. However, She fails to teach a method of reducing computations according to the method of the present application $G = \lceil L(N)/b \rceil$.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
